60 YEARS

A System for Measurements

We are an innovative mid-sized company that has firmly established itself as one of the leading providers of industrial measuring equipment for high-pressure system diagnostics and condition monitoring – both nationally and internationally. Moreover, we employ over 140 people worldwide as the Hydrotechnik Group and not only operate locations in Germany, but also sales branches in France, Italy, China, Singapore, Japan, India and the US.

We provide our customers with unbeatable “Made in Germany” product quality, and our products are manufactured exclusively in Germany. In addition, we are known for cultivating long-term relationships with our customers and offering unrivalled service and solutions for everything having to do with measuring equipment.

Trendsetting details and innovations

MINIMESS®

Expertise in everything having to do with hydraulic measuring technology is one of the main constants behind the history of Hydrotechnik. In fact, the **MINIMESS®** plug-in coupling featuring a ball check was first launched on the market in 1964, immediately redefining what was possible in the field of pressure measuring technology for hydraulic systems. And it was no surprise, as the advantages behind the novel development were immediately compelling: Instead of having to open the hydraulic circuit and install a pressure gauge for diagnostic or maintenance activities, the innovation had suddenly made it possible to quickly and safely connect pressure sensors and gauges without any downtime.

The name Hydrotechnik has long been considered a standard-bearer in the area of hydraulic measuring equipment, and that is even before the introduction of its new leak-proof test point with a soft seal in 1982.

Previous developments such as the **MINIMESS®** p/T test point, which can be used to measure pressure and temperature at a single measuring point directly in a fluid, and the **MINIMESS®** gas charging valve, with its excellent gas tightness, had already made it clear that Hydrotechnik GmbH was a force of innovation to be reckoned with.

From small-scale handmade batches to series production

From the very moment Hydrotechnik GmbH was

founded, every single product has been made at the company's headquarters in Limburg an der Lahn. A high level of vertical integration and lean processes enable us to quickly respond to our customers' needs – from handmade small-scale production for the most demanding measuring tasks to mass production. Hydrotechnik GmbH always uses the best approach to provide users with safe, high-quality products that are specifically fine-tuned to match their requirements.

The future looks bright

By continuously enhancing and developing its products for applications in an extremely wide variety of industries and combining that with decades of experience, Hydrotechnik GmbH has remained an unrivaled partner for products and services that go far beyond the classic test point.

From the project phase, through prototypes, to the finished product, we actively support our customers worldwide with the implementation of their projects. In fact, we are known for implementing the most extraordinary applications without ever losing focus on the big picture or on detail and utmost meticulousness. An international presence and unrivalled experience with the **MINIMESS®** make us the ideal partner for your needs – today and well into the future.

ORIGINAL MINIMESS® TEST POINTS

The go-to system access solution for fluid circuit analyses, sampling, charging, and venting.
The p/T version can be used to measure pressures and temperatures at a single measuring point at the same time.

ORIGINAL MINIMESS^{XTREME}® TEST POINTS

Pressures of up to 1,000 bar, immersion depths of up to 5,000 m, and temperatures as low as -60 °C are simply a matter of course for these high-performance products. In other words, they are the product of choice for the most demanding measuring tasks out there.

Original MINIMESS® test points

The benchmark for test couplings

MINIMESS® test points serve as system access points for analyses and tests in fluid circuits, and can be used to make a leak-tight connection under pressure. This makes it possible to connect sensors or pressure gauges or draw samples as necessary without any downtimes. Moreover, the test points can be used to fill, vent, and empty systems.

Original MINIMESS® test points

- | Are an integral part of measuring and testing equipment
- | Can be used to make leak-tight connections under pressure
- | Open and close automatically when a hose or sensor is connected / disconnected
- | Save time and money by making diagnostics and maintenance faster, improving machine availability as a result
- | Save money by ensuring that expensive sensors do not have to be permanently installed for servicing purposes
- | Conform to ISO 15171-2 (MINIMESS® 1620)
- | Have a four-fold safety factor in regard to bursting
- | Are certified with 1,000,000 pressure pulses at 1.3 times the operating pressure
- | Can also be used at low temperatures
- | Are highly resistant to corrosion (salt spray test longer than 1,000 hours)
- | Are suitable, without restrictions, for HL, HLP, HVLP hydraulic fluids in conformity with DIN 51524

The original MINIMESS® 1620 p/T test point is a multipurpose test point that can be used to simultaneously measure pressure and temperature at a single measuring point. As a result, the number of required measuring points can be reduced by up to 50%.
The temperature is measured directly in the flowing fluid, resulting in extremely short response times.

For information on compatible HySense® p/T combo sensors, please refer to page 144.

Original MINIMESS® 1620 test point

The MINIMESS® 1620 test point with an M16 x 2 thread is the top seller among test couplings and is used for most standard applications. It can be used with operating pressures of up to 630 bar and is available in a wide variety of versions with various international threads and seal types.

Original MINIMESS® 1620 p/T test point

The MINIMESS® 1620 p/T test point can be used to simultaneously measure pressure and temperature with only one single test coupling by using a p/T multipurpose sensor. This results in fewer measuring points and sensors being required.

The p/T test point can be used with operating pressures of up to 630 bar.

Original MINIMESS® 1615 test point

The MINIMESS® 1615 test point was developed primarily for military applications and has an alternative M16 x 1.5 coupling thread available. It can be used with operating pressures of up to 630 bar and is available with various threads.

Original MINIMESS® 1215 test point

The MINIMESS® 1215 test point is characterized by a small coupling thread, resulting in a very compact design. It was originally developed as an alternative test point for metrological applications in places where space is tight. The test point can be used with operating pressures of up to 630 bar and is available with various international threads and seal types.

Original MINIMESS[®]Xtreme[®] test points for liquids and gases

Offshore

MINIMESS[®] Offshore series test points and gas charging valves were developed for direct contact with salt water, and their premium stainless steel construction enables them to withstand the extreme environmental conditions present at sea.

- | Body, internal parts, and cap made of corrosion-resistant 1.4571 stainless steel
- | Can be used with temperatures as low as -40 °C
- | Splash-proof

Deep Sea

MINIMESS[®] Deep Sea series test points and gas charging valves are designed for high ambient pressures of up to 500 bar.

Moreover, their special construction makes it possible to use them safely at deep depths by reliably preventing the ingress of salt water.

- | Designed to withstand ambient pressures of up to 500 bar and depths of up to 5,000 meters
- | Body, internal parts, and cap made of corrosion-resistant 1.4571 stainless steel
- | Absolutely no leaks when subjected to internal and ambient pressure

Fluids

MINIMESS[®] test points for special fluids are characterized by high chemical and thermal resistance. This is particularly important for the chemical, aviation, and vehicle manufacture industries, which use fluids that entail special requirements for seal materials. It also means that MINIMESS[®] test points for special media can be used for an extremely wide variety of applications.

- | High chemical resistance against aviation hydraulic fluid (Skydrol[®]), brake fluid (DOT3 to DOT5), etc.
- | High resistance to temperatures of up to more than 300 °C when using special FFKM seals
- | Available with a free cutting steel or stainless steel body

Low Temperature

MINIMESS[®] low-temperature test points, which are made of stainless steel, can be used at extremely low temperatures. The secret consists of special seal materials that ensure safe and reliable sealing under extreme cold conditions.

- | Can be used with temperatures as low as -60 °C
- | Premium-grade elastomers
- | We also have compatible low-temperature hoses available

Pressure

The new MINIMESS[®] high-pressure test point combines all the characteristics of our classic MINIMESS[®] test points with a significantly higher pressure resistance. The test point is tested to four times its maximum operating pressure to ensure the safety of its users and, and thanks to its special screw cap thread, can be coupled even at high pressures without increased effort.

- | Operating pressures of up to 1,000 bar
- | Burst pressure > 4,000 bar
- | Long service life: > 1,000,000 pressure pulses at 1,330 bar
- | For liquid or gaseous media

Original MINIMESS® gas charging valves and accessories

Original MINIMESS® gas charging valves are designed to make it easy and fast to fill, empty, and test hydraulic accumulators. Moreover, they can be used as system access points for maintenance, monitoring, and analysis tasks on gas-conveying systems.

On top of this, extraordinarily low leakage flow rates make MINIMESS® gas charging valves the ideal choice for long-term use in systems with extremely demanding safety requirements as well.

Original MINIMESS® gas charging valves

- Feature extraordinary gas tightness with a leakage flow rate < 2·10⁻⁵ mbar·l/s (He) within a permissible temperature range of -20 °C to 135 °C
- Can be used to make connections under pressure
- Open and close automatically when a charging device or sensor is connected / disconnected
- Save time and money by making diagnostics and maintenance faster, improving machine availability as a result
- Save money by ensuring that expensive sensors do not have to be permanently installed for servicing purposes
- Have a four-fold safety factor in regard to bursting
- Can also be used at low temperatures
- Are made of corrosion-resistant stainless steel
- Are suitable for all inert gases
- 100% inspection before delivery

Original MINIMESS® 1615 gas charging valve

The original MINIMESS® 1615 gas charging valve is designed specifically for use with inert gases and features an extraordinary low gas leakage flow rate of less than 2·10⁻⁵ mbar·l/s (He). It can be used with operating pressures of up to 630 bar and is available with various threads.

² M = Tightening torque for stud end in conformity with the applicable standards. It is the user's own responsibility to determine the appropriate installation torque for their specific installation situation.

³ p_n = Maximum operating pressure

Original MINIMESS® 1215 gas charging valve with DVGW certification

The original MINIMESS® 1215 DVGW gas charging valve can be used to establish a system access point for gas pressure regulating stations and connect control measuring devices for pressure measurement and gas sampling as specified in DVGW Code of Practice G 491, Section 5.7.1. It can be used with operating pressures of up to 250 bar and is characterized by a small coupling thread resulting in a very compact design and an extraordinary low gas leakage flow rate of less than 2·10⁻⁵ mbar·l/s.

- I DVGW certification for:
Products for gas supply applications
- I Registration number: DG-4513BL0337
- Certificate owner and distributor:
Hydrotechnik GmbH

Original MINIMESS® 1615 gas charging valve with accumulator adapter

The original MINIMESS® 1615 gas charging valve featuring an accumulator adapter can be used to directly install the valve on all popular bladder accumulators and can be used with operating pressures of up to 400 bar. This gas charging valve makes it possible to safely charge and empty accumulators with an extremely low leakage flow rate.

MINIMESS® accumulator charging and testing device

The MINIMESS® accumulator charging and testing device can be used to charge and test multiple accumulators without having to close the pressure source (usually a nitrogen cylinder).

The pressure in the charging and testing device can be relieved after closing the nitrogen cylinder by opening the relief valve.

In contrast to devices for which the pressure source needs to be closed after every charging operation, the MINIMESS® accumulator charging and testing device can be used to charge or test multiple accumulators, saving time and cutting costs as a result.

Gas charging and testing device with pressure regulator

Premium quality. Made in Germany. For charging, adjusting, and monitoring gas pressures in nitrogen hydraulic accumulators and featuring pressure gauges with a diameter of 63 mm and accuracy class 1.6.

Adapter options with original MINIMESS® test points

Special installation situations, grouping together multiple measuring points at a central location, or retrofitting into existing systems – all child’s play with the various fitting and adapter options for MINIMESS® test points.

Adapter option examples:

- Combi fitting tees make it possible to retrofit or install MINIMESS® test points on hydraulic system pipes and hose lines. They have a 360° swivel range, meaning that they can adapt optimally to an extremely broad range of installation conditions. Combi fitting tees are available with 24° sealing cone and O-ring (DKO) connections in conformity with ISO 8434-1 as standard. Upon request, versions with a 37° flared fitting in conformity with ISO 8434-2, with an ORFS connector as per ISO 8434-3, or with a 60° cone as per ISO 8434-6 are available.
- MINIMESS® bulkhead test points can be used, for example, to group together multiple test points at an easily accessible location, making maintenance easier as a result.

Original MINIMESS® 1620 test point with DKO fitting

MINIMESS® test points with fittings for 24° sealing cone fittings with an O-ring make it possible to easily use the test points in systems with sealing cone connections that conform to DIN 2353 / ISO 8434-1.

Original MINIMESS® test point with 90° swivel fitting.

The swivel fitting makes it possible to adjust the test point position exactly as required for installation. In fact, the MINIMESS® can swivel 360° about the hole axis, making it easy to position it optimally.

A DKA sealing ring is used for sealing at the thread (banjo bolt).

Original MINIMESS® 1620 bulkhead test point

MINIMESS® bulkhead test points can be used to group together multiple measuring points at a central system servicing point. This results in significantly easier maintenance when used to replace a large number of test points that are difficult to access.

MINIMESS®
Hose lines

MINIMESS® hose lines make up an essential part of the MINIMESS® family of products. These hose lines have been developed specifically for high-pressure applications with pressures of up to 630 bar and are characterized by their resistance to aggressive fluids and a versatility that makes them ideal for use as control, diagnostic, and measuring hoses.

These hose lines can be used to conveniently group measuring points and route them to an easily accessible location in order to make maintenance and diagnostic activities easier.

They can then be combined with MINIMESS® bulkhead test points or pressure gauge connections for bulkheads so as to easily and quickly connect sensors or pressure gauges.

In addition to hose lines for standard hydraulic applications, we offer a variety of additional alternatives, e.g., for low-temperature and gas applications.

MINIMESS® hose lines are crimped and tested at Hydrotechnik and make an undeniably compelling case with their high quality and long service life.

Original MINIMESS® Minivalv

Maximum Damping – Minimum size.

The MINIMESS® Minivalv is an extremely compact throttle check valve that is typically installed in the hydraulic pilot line so as to restrict the flow at the directional control valve's outlet.

Its purpose is to make sure that poppet motion from or to the neutral position will always be damped so that the corresponding actuator will start up softly and in a controlled manner.

In contrast to a simple restrictor, the way in which this throttle check valve is built ensures that a vacuum cannot be produced at the intake. Moreover, the throttle check valve reduces the volumetric flow rate in one direction of flow and allows it to flow freely in the other. Depending on the desired flow rate, either a hole or a notch is used on the poppet in order to implement the reduced cross section.

Notched poppets are the preferred option for very small reduced cross sections, as they have a special advantage: Impurities that settle inside the notch can be easily flushed out when the direction of flow is reversed. For larger reduced cross sections, poppets with a hole are used instead, as they are more cost-effective.

Flat Face diagnostic coupling

The Flat Face system has won endless converts as a result of its compact design and the fact that the absence of a thread makes it easy to clean.

The diagnostic coupling is used in applications with hydraulic oils as operating medium, the coupling side conforms to ISO 15171-1, and the maximum operating pressure is 400 bar.

The Flat Face diagnostic coupling is highly resistant to corrosion and successfully passes a 1,000-hour salt spray test.

The MINIMESS® Minivalv throttle check valve

- Is an effective and cost-effective solution that can be easily integrated and makes it possible to start actuators softly
- Is ideal for places where space is tight, as it is no bigger than a standard nipple fitting
- Is available with various orifice sizes and threads
- Is highly resistant to corrosion (salt spray test longer than 1,000 hours)

Technical specifications	
Operating pressure	– Up to max. 400 bar
Versions	– Restrictor hole diameter of 0.5 mm to 1.0 mm – Restrictor notch, equivalent to a restrictor hole diameter of 0.3 mm to 0.5 mm
Stud end	– 9/16-18 UNF, ISO 11927-2 – ISO 228-G 1/4, ISO 9974-2
Connector end	– 9/16-18 UNF, ISO 8434-3 – 11/16-16 UN, ISO 8434-3 – M14 x 1.5 8L, DIN 2353

Test coupling for air brake systems

Coupling for testing initial delay times and pressures in air brake systems for road vehicles in conformity with ISO 3583.

In both diagrams, curve 1 shows the pressure loss of the hose without fittings. Meanwhile, curve 2 shows the pressure loss of the hose line with MINIMESS® fittings on both ends. The oil viscosity is 30 mm²·s⁻¹ in both.

Installation notes for MINIMESS® hose lines

General technical notes for MINIMESS® products

	<p>The length of a hose line can change when the latter is subjected to loads, with a reduction in length entailing a greater tensile load on the hose and the connections. Accordingly, it is important to ensure that the hose line sags a little when depressurized. Please do not tighten the swivel nuts beyond the point where the connection becomes tight, as overtightening them will not improve leak-tightness, but will damage the connection instead.</p>
	<p>If using curved routing, make sure to observe the permissible bend radius and avoid sharp bends. When calculating the length of a hose line that is routed with a curve, keep in mind that the fittings are not flexible. Accordingly, correctly sizing the free hose length between the fittings is essential.</p>
	<p>There are 90° fittings available for when installation situations warrant their use. These fittings have such a small radius that they make it possible to ensure that the corresponding hose will be routed properly even when there is little space available.</p>
	<p>90° fittings should be used when the connections' position does not allow for a "hanging arch" and there is always a risk of kinks close to the connections in the case of a "horizontal arch."</p>

Please make sure to use appropriately sized retainers (e.g., clamps). The hose must not rub against the retainer or be squeezed by it. Moreover, the retainer must preferably go around the hose.

Intended use

MINIMESS® products are intended for use with group 2 fluids as defined in Pressure Equipment Directive 2014/68/EU (non-hazardous fluids).

Chemical compatibility

MINIMESS® test points:

- Are suitable, without restrictions, for HL, HLP, HVLP hydraulic fluids in conformity with DIN 51524.
 - Are only resistant to fire-resistant and environmentally acceptable hydraulic fluids to a limited extent: HEES, HEPR, HEPG; HFDM, HFDR, HFC in conformity with ISO 12922 and ISO15380.
- Using fire-resistant or environmentally acceptable hydraulic fluids may affect the test points' technical characteristics (temperature range, pressure range, service life, etc.)

MINIMESS® gas charging valves:

- Are suitable, without restrictions, for all inert gases.
- Are also suitable for HL, HLP, HVLP hydraulic fluids in conformity with DIN 51524.

MINIMESS® hose lines:

- Are suitable, without restrictions, for HL, HLP, HVLP hydraulic fluids in conformity with DIN 51524.

For information regarding compatibility with other fluids, please refer to the resistance specifications on page 69. The use of other fluids must be checked on a case-by-case basis.

Certification criteria

MINIMESS® products are tested and certified in conformity with the relevant standards. Moreover, when there are no standards for specific characteristics, we define our own test criteria for those characteristics based on standards for related products, ensuring that we can stand 100 percent behind our products. Testing is carried out on build samples for the corresponding item or on parts that are identical in terms of the characteristics being tested.

Resistance to corrosion

MINIMESS® products made of free cutting steel are protected against corrosion with a zinc-nickel coating. A corrosion resistance > 1,000 h has been verified with a salt spray test in conformity with DIN EN ISO 9227.

Pressure Equipment Directive 2014/68/EU

MINIMESS® test points, gas charging valves, and hose lines are designed and manufactured in conformity with the sound engineering practice of Germany as required by Article 4 of the Pressure Equipment Directive 2014/68/EU. This guarantees the safety of our products. These products should not bear the CE marking.

Packaging

Packing unit in cardboard box or in polyethylene bag and outer packaging. Alternatives available upon request.

Storage recommendations

MINIMESS® products with elastomeric seals:

Shelf lives vary by elastomer type in conformity with DIN 7716.

The storage period until installation and commissioning should not exceed 2 years.

MINIMESS® hose lines:

Storage and transportation instructions in conformity with DIN EN ISO 8331

- Store in a cool and dry place. Avoid direct exposure to sunlight and UV rays.
- Avoid sources of radiant heat.
- Avoid ozone-generating lamps and electrical equipment that produces sparks in the immediate vicinity.
- The ideal storage conditions are temperatures between +15 °C and +25 °C, a relative humidity of 65%, and UV-blocking film in order to shield from UV radiation.

A storage time of 2 years should not be exceeded for hoses.

REACH Regulation (EU) No.1907/2006, Art. 33

As a manufacturer of products, HYDROTECHNIK GmbH is a downstream user of low quantities and accordingly is not subject to mandatory registration. In accordance with Article 33 of the REACH Regulation, we are hereby informing you that the free machining steel products we supply may contain a lead concentration of up to 0.35% weight by weight and that the brass products we supply may contain a lead concentration of up to 3.5% weight by weight. Other than this, our products do not contain any other substances found in the 2019 Candidate List of Substances of Very High Concern (SVHC).

Safety notes

Products must be assembled and installed exclusively by qualified personnel. It is recommended to always keep the protective cap on MINIMESS® test points and gas charging valves in place when they are not being used directly as system access points.

General notes

The products must be used exclusively as intended. The purchaser is responsible for making sure that the products are suitable for the intended application and for use under the corresponding operating conditions, and Hydrotechnik GmbH hereby disclaims all liability within this context. We reserve the right to make changes to products and documentation, as a result of technological progress and continuous improvement, without notice. The specifications applicable after these changes may be different from the specifications in this catalog.

Resistance specifications

- | Seal materials: NBR (Perbunan), FKM (Viton)

Seawater	1	1	3	3	2	1	1	1	1

Key:

1 = Good; absolute resistance without any changes

2 = Limited; resistance depends on length of use and operating conditions

3 = Not recommended; the material will be attacked and the mechanical properties will degrade

4 = Light diffusion in the cases of gases; use only as a testing and filling hose. For continuous use, we recommend our stainless steel pipes instead

5 = Slight transparent material discoloration

6 = Light swelling but no changes to mechanical properties

*) Suitable seal materials available upon request

Hydrotechnik Sensors

HySense®

HySense® family

The Greek philosopher Heraclitus said it over 2,500 years ago: “Panta rhei.” This saying, which can be translated as “everything flows,” still holds true today, when success in the cutting-edge plant and production worlds of Industry 4.0 depends significantly on data quality and system precision. Needless to say, this also means that the success of an industrial measurement depends on the reliability of the corresponding data acquisition. That is where Hydrotechnik sensors come in with their extraordinary quality and reliability.

Technicians, engineers, and skilled workers who commission, operate, maintain, and repair systems and machines need valid data from sound measurements. In fact, this is the only way for them to be able to take the right actions and meet their customers’ expectations. And R&D specialists, such as development and applications engineers in the plant and machine design engineering fields, also benefit from the know-how that goes into our products, which is

why they and the aforementioned professionals all appreciate our “Made by Hydrotechnik” high-precision sensors. These sensors are optimized for use in high-pressure fluid systems and hydraulic systems in particular, but they are also in use in many other areas. And this should come as no surprise, as the products combine a robustness and long life that meet all the requirements involved in continuous use with a solid price–performance ratio. Moreover, our in-house DAkkS-accredited calibration laboratory guarantees maximum accuracy and consistent quality for every single one of our sensors.

HySense® Q Flow meters

Hydrotechnik HySense® Sensor intelligence

ISDS (Intelligent Sensor Detection System) functionality

The ISDS functionality developed by Hydrotechnik makes it much easier to operate Hydrotechnik measuring equipment while also improving measurement accuracy. This functionality consists of two main functions:

Automatic sensor detection in the Hydrotechnik measuring device

After a sensor is connected to the measuring device, the corresponding channels (sensor signal, measurement variable, measuring range, etc.) are configured in the measuring device automatically. This means that users do not need to configure the sensors in the device, effectively making the sensors plug-and-play devices, preventing input mistakes, and making life easier for users in general.

Reading linearization in the measuring device

In order to improve performance, the sensor characteristic curve determined during calibration is stored in a table in the sensor. Then, as soon as the sensor is connected to the measuring device, the device reads the table and starts using it to linearize the sensor readings. The result? Significantly higher measuring accuracy.

Smart sensors

The term “smart sensors” refers to sensors that, in contrast to conventional ones, not only measure properties, but also take care of processing the corresponding signal completely and process and interpret their readings based on stored algorithms. These sensors contain a microcontroller with sufficient computing power, and are accordingly also referred to as “intelligent sensors.” All our smart sensors come with our ISDS functionality, but the difference is that the linearization is carried out in the sensor itself rather than externally by the measuring device. The Hydrotechnik portfolio features a large number of smart sensors, such as the **HySense®** QT 510, RS 510, CX 197, SC 100, etc.

HySense® Q family

The flow meters in the **HySense®** Q family are the result of decades of experience developing and manufacturing flow meters. Combined with the tools of the trade, such as our in-house DAkkS calibration laboratory, our production operations, etc., this experience enables Hydrotechnik to consistently deliver extraordinarily reliable quality and cost-effectiveness.

Both the global move towards renewables and the accompanying concern with energy efficiency have made flow metering absolutely crucial, as it is an indispensable part of development activities, diagnostic work, condition monitoring, and predictive maintenance for fluid systems. And as a solution provider in the field, Hydrotechnik has four different product families that cover virtually every application thanks to their versatility and that have specific advantages and characteristics each.

HySense® QT

Turbine flow meters: HySense® QT

Characteristics

- | High measuring accuracy and reproducibility
- | Flow measurements with a high dynamic range
- | Compact and lightweight
- | Heavy-duty construction for high operating pressures and resistance up to 420 bar
- | Low pressure losses

Applications

- | Stationary and mobile flow measurements
- | Testing pump units
- | Adjusting the flow rate for hydraulic attachments on heavy equipment
- | Heating and cooling circuit condition monitoring
- | Lubricant monitoring in manufacturing systems
- | Systems with dynamic and bidirectional flow rates
- | Diagnostic tasks

HySense® QG

Gear flow meters: HySense® QG

Characteristics

- | Wide measuring range combined with extremely high measuring accuracy and reproducibility
- | Wide viscosity range; performance virtually unaffected by different viscosities
- | Heavy-duty construction for high operating pressures and resistance up to 630 bar
- | Integrated flow direction detection

Applications

- | Volume and flow rate measurements
- | Cylinder travel or speed measurements
- | Filling and metering an extremely wide variety of fluids
- | Ensuring correct mixing ratios
- | Leakage measurement and rupture monitoring
- | Measuring tasks for control purposes in test stands
- | Fuel consumption measurements

HySense® QL

Turbine flow meters with integrated throttle valve: HySense® QL

Characteristics

- | Integrated proportional valve for load simulations
- | High measuring accuracy and reproducibility
- | Flow measurements with a high dynamic range
- | Body made of high-strength aluminum; lightweight
- | Heavy-duty construction for high operating pressures and resistance up to 420 bar

Applications

- | Stationary and mobile flow measurements
- | Testing the operation and performance of pump units
- | Adjusting pump controllers and pressure control valves
- | Diagnostic tasks

HySense® QO

Oval gear flow meters: HySense® QO

Characteristics

- | High measuring accuracy and reproducibility
- | No straight pipe runs required for the inlet and outlet
- | Wide viscosity range
- | Can be disassembled for cleaning
- | High resistance to aggressive fluids
- | High temperature resistance

Applications

- | Volume and flow rate measurements
- | Filling and metering
- | Fuel consumption measurements
- | Measuring tasks for control purposes in test stands
- | Measurements in aggressive fluids

HySense® QT 600

In combination with the measuring devices in the MultiSystem series, the new Hydrotechnik HySense® QT 600 turbine meter generation makes it possible to measure volumetric flow rates accurately with various hydraulic fluids and varying temperatures.

The technology not only combines high flexibility with user friendliness and ease of use, but also saves users a significant amount of time.

HySense® QG 100

The gear flow meters in the HySense® QG family are the result of decades of experience developing and manufacturing flow meters. Gear flow meters are positive displacement meters and use one of the most accurate methods available for measuring flow.

HySense® QG 100 is part of the standard series in the Hydrotechnik portfolio. As a result of its tooth geometry, the various bearing solutions, and premium-grade materials, the HySense® QG 100 is a true all-rounder when it comes to volume and flow measurement.

HySense® QG 200

HySense® QG 200 is our high-end solution in the area of gear flow meters. The series as a whole makes an undeniably compelling case with its high measuring accuracy, heavy-duty durability, an extremely wide measuring range, and flow direction detection. Moreover, the option to use manifold mounting or threaded connections on the side allows for flexible system integration.

Threaded connections on the side available upon request

HySense® QL 1xx

The HySense® QL series was designed for development and diagnostic activities, and in particular to test the performance of pump units and determine pump characteristic curves. The series combines a turbine flow meter with an adjustable load valve, making it possible to conduct a defined load simulation in hydraulic systems.

The HySense® QL 1xx is sized for use with flow rates of up to 300 L/min and features a large hand valve that makes it possible to conveniently and precisely control the throttle valve.

HySense® QO 400

The HySense® QO 400 is a versatile oval gear flow meter that can be used to measure both volume and flow rate in machine building, plant automation, and process instrumentation applications. Its design and materials make it a perfect fit for use with corrosive fluids, acids, bases, solvents, and dyes. Moreover, its excellent chemical compatibility, combined with resistance to temperatures of up to 125 °C, make it the very definition of a high-end oval gear flow meter.

Actual product similar to picture

General characteristics	
Fluid	Acids, bases, corrosive fluids, cleaning agents, coolant*
Flow range	0.03 ... 660 L/min

HySense® P
Pressure sensors, pressure switches,
and pressure gauges

HySense® P family

Needless to say, pressure is an extremely important and central consideration when it comes to fluid engineering and technology. Accordingly, pressure measurements are carried out for a broad variety of purposes, including adjusting systems and plants and carrying out fault diagnostics, maintenance and service work, and monitoring and development tasks. And with the **HySense® P family**, Hydrotechnik has just the right pressure sensor, pressure switch, or pressure gauge for each of these needs.

HySense® PR 1xx

HySense® PR 1xx is the Hydrotechnik standard in the area of pressure measurement. These pressure sensors are perfect for both temporary diagnostic tasks and for stationary measuring tasks such as condition monitoring and predictive maintenance. Excellent strength, a wide measuring range of -1 to 2500 bar, and a wide variety of available versions make these pressure sensors all-rounders in every sense of the word.

General HySense® PR 1xx characteristics	
Sensor principle	Piezoresistivity
Pressure type	Relative pressure*
Measuring accuracy with ISDS @ 25 °C	±0.2% of full scale
Measuring accuracy without ISDS @ 25 °C	±0.5% of full scale
Overload range	2 x rated pressure (≤ 200 bar) 1.5 x rated pressure (> 200 ... 500 bar) 1.2 x rated pressure (> 500 ... 2000 bar)
Burst pressure	3 x rated pressure (≤ 200 bar) 2 x rated pressure (> 200 ... 500 bar) 1.5 x rated pressure (> 500 ... 2000 bar)
Body material	Stainless steel
Diaphragm material	Stainless steel or silicon
Sampling rate	1 kHz
Fluid temperature	-40 ... 125 °C
Ambient temperature	-40 ... 105 °C
Installation position	Any

HySense® PR 400

The HySense® PR 400 is a high-precision pressure sensor with a high dynamic range that was developed specifically for demanding and sophisticated measuring tasks in R&D, calibration laboratory, and high-precision measuring system applications. It is even able to measure dynamic shock at a high resolution thanks to a sampling rate of over 10 kHz.

Dimensions in mm

A	M16 x 0.75, 6-pin
B	AF 22
C	ED seal in conformity with DIN 3869, FKM

General characteristics	
Sensor principle	Piezoresistivity
Pressure type	Relative pressure
Measuring accuracy @ 25°C	±0.25% of full scale
Output signal	4 ... 20 mA, ISDS
Overload range	1.5 x rated pressure
Burst pressure	2.5 x rated pressure
Body material	Stainless steel
Diaphragm material	Stainless steel
Sampling rate	Up to 10 kHz
Fluid temperature	-40 ... 125 °C
Ambient temperature	-20 ... 80 °C
IP degree of protection	IP67 (DIN EN 60529)
Weight	140 g
Installation position	Any

Measuring range* bar	Color coding	Part No.
0 ... 60	Orange	34P3-21-S-01.37A2
0 ... 250	Yellow	34P3-17-S-01.37A2

HySense® PR 509

The HySense® PR 509 is a heavy-duty, compact pressure sensor with an unbeatable price–performance ratio. In addition, its integrated measuring cable makes it easy to quickly connect the sensor to an evaluation unit.

Dimensions in mm

A	M16 x 0.75, 6-pin
B	AF 22
C	ED seal in conformity with DIN 3869, FKM

General characteristics	
Sensor principle	Piezoresistivity
Pressure type	Relative pressure
Measuring accuracy @ 25°C	±0.5% of full scale
Output signal	4 ... 20 mA, ISDS only with MultiHandy MH2025
Overload range	1.5 x rated pressure
Burst pressure	3 x rated pressure
Body material	Stainless steel
Diaphragm material	Stainless steel
Sampling rate	1 kHz

General characteristics	
Fluid temperature	-40 ... 150 °C
Ambient temperature	-25 ... 85 °C
IP degree of protection	IP67 (DIN EN 60529)
Weight	160 g, incl. cable
Installation position	Any

Measuring range* bar	Color coding	Part No.
0 ... 60	Orange	3403-21-S-A1.37
0 ... 250	Yellow	3403-17-S-A1.37

HySense® MultiEPC

The HySense® MultiEPC is an electronic pressure switch with an extraordinary level of functionality. It is available in standard and DESINA versions with one or two independently programmable limit switches. And to top it all off, the heavy-duty housing, which can rotate axially, features an integrated display.

Dimensions in mm

A	M12 x 1, 5-pin
B	AF 22
C	ED seal in conformity with DIN 3869, FKM
D	ISO 228-G 1/4 A

General characteristics	
Sensor principle	Piezoresistivity
Pressure type	Relative pressure
Measuring accuracy @ 25°C	±0.5% of full scale
Output signal	0 / 4 ... 20 mA
Switching output	Two high-side switching MOSFETs
Switching current	Max. 0.7 A
Body material	Die casting
Diaphragm material	Stainless steel
Sampling rate	100 Hz
Fluid temperature	-20 ... 85 °C
Ambient temperature	-20 ... 85 °C
IP degree of protection	IP67 (DIN EN 60529)
Weight	350 g
Installation position	Any

Measuring range bar	Part No.*

HySense® PS 280

The high-precision HySense® PS 280 pressure switch makes a compelling case with its compact design and a wide variety of configuration options. Various parameters, such as the pressure range, mechanical and electrical connections, cable length, pinout, signal output, function type, and switching value can be chosen freely, enabling customers to get the perfect solution for their specific measuring application.

A	Variable
B	AF 22

HySense® analog pressure gauges

Analog pressure gauges are the simple and most cost-effective solution for a variety of pressure monitoring applications. Reliability and mechanical strength make these pressure gauges true all-rounders, and the fact that they combine an axially rotating indicator with a MINIMESS® gauge adapter ensures that readings can be conveniently read.

Dimensions in mm

General characteristics	
Case diameter	63 mm
Unit	bar & psi
Measuring accuracy	1.6% of full scale
Liquid filling	Silicone oil
Body material	Stainless steel
Connection direction	Down

HySense® digital pressure gauges

Digital pressure gauges are the ideal solution when it comes to taking on-site pressure measurements without having to connect to a power source. Accuracy, reliability, and mechanical strength make these pressure gauges true all-rounders. Moreover, they feature a min/max hold function and can be rotated axially as necessary in order to make it easier to read the display.

HySense® custom solutions

Both highly complex measuring tasks and highly specific measuring tasks require the use of custom solutions that often go beyond what a standard product portfolio has to offer. This is why we at Hydrotechnik have made it one of our core focuses to implement custom solutions with unparalleled quality in order to meet our customers' specific needs. Following are a couple of examples:

HySense® PR 130 - J5

High-pressure version with an M16 x 1.5 female thread for pressures of up to 2000 bar

HySense® PR 180 - G6

Custom version with an AMP bayonet circular connector (3-pin) and a 1 ... 5 V output signal

HySense® PR 280

Special miniature sensor, perfect for use in places where space is extremely tight, such as directional control valves

Available electrical connectors	
M16 x 0.75, 7-pin	Type A valve connector, 3-pin
M16 x 0.75, 6-pin	Type C valve connector, 3-pin
M16 x 0.75, 5-pin	Hirschmann G Series valve connector, 4-pin
M12 x 1, 5-pin	Bayonet circular connector, keying 1, 3-pin
M12 x 1, 4-pin	More available upon request
Unterminated cable end	

Available output signals	
4 ... 20 mA	1 ... 5 VDC
0 ... 20 mA	1 ... 6 VDC
0 ... 10 mA	0 ... 10 VDC
0.5 ... 4.5 VDC (ratiometric)	0.2 ... 1.6 kHz
0 ... 5 VDC	CANopen

Available pressure ranges	
-1 ... 6	0 ... 400
0 ... 1	0 ... 600
0 ... 10	0 ... 1000
0 ... 25	0 ... 2000
0 ... 60	0 ... 2500
0 ... 100	0 ... 4000
0 ... 250	

Available mechanical connections

HySense® T

Temperature sensors

HySense® T family

With the HySense® T family, Hydrotechnik offers high-quality sensors for temperature measurements in liquids, gases, and solids. The products in this family are based on a modular system, meaning that custom solutions can be implemented quickly and easily. In fact, decades of experience have resulted in Hydrotechnik having a patented solution for temporary temperature measurements in closed systems. A MINIMESS® p/T test point can be used to install temperature sensors in a system under pressure without any leaks.

HySense® TE 200

The HySense® TE 200 is an all-purpose handheld temperature sensor that can be used for an extremely wide range of measuring tasks, such as measuring temperatures in fluids and powders, as well as on surfaces. The long probe and the flexible coil cord make it easy to quickly measure temperatures even at locations that are difficult to access.

General characteristics	
Sensor principle	Pt100
Measuring range	-50 ... 400 °C
Output signal	4 ... 20 mA, ISDS
Mechanical measuring connection	Immersion and surface probe
Electrical measuring connector	M16 x 0.75, 6-pin*
Measuring accuracy	1% of full scale
Ambient temperature	-40 ... 70 °C
Body material	Plastic
Probe tip material	Stainless steel
Weight	207 g
IP degree of protection	IP40 (DIN EN 60529)

* More available upon request

Sensor	Model	Temperature range	Part No.
HySense® TE 200	Surface probe	-50 ... 200 °C	3170-01-S-03.00
		-50 ... 400 °C	3170-01-S-07.00
	Immersion probe	-50 ... 200 °C	3170-02-S-06.00
		-50 ... 400 °C	3170-02-S-08.00

HySense® TE 3xx

The HySense® TE 3xx series is perfect for carrying out temperature measurements on liquids and gases in closed systems. It features a wide variety of available electrical and mechanical connections, making it easy to quickly integrate the devices into systems – a characteristic that is further enhanced by the fact that both the probe length and the probe diameter can be individually configured. The main characteristic behind these temperature sensors, however, is their superior durability and strength – a million pressure changes at up to 600 bar are no problem. All this makes the HySense® TE 3xx the perfect temperature sensors for any hydraulic application.

Electrical connectors			
M12 x 1, 4-pin	M16 x 0.75, 6-pin	AMP DIN 72585, 3-pin	Type C valve connector, 3-pin Pg9

HySense® TP 180

The HySense® TP 180 is a high-precision dual sensor that measures both temperature and pressure at the same measuring point simultaneously. When combined with a MINIMESS® p/T test point, a fast and simple connection to the fluid can be established without any system downtimes. Moreover, direct contact with the fluid ensures that high-precision, dynamic temperature and pressure measurements can be carried out.

General characteristics	
Sensor principle	Temperature: Pt100, pressure: Piezoresistive effect
Measuring range	-50 ... 200 °C, 0 ... 600 bar
Output signal	4 ... 20 mA
Mechanical measuring connection	For MINIMESS® 1620 p/T test point
Electrical measuring connector	M16 x 0.75, 8-pin
Measuring accuracy @ 25°C	Temperature: 0.5% of full scale; pressure: ±0.5% of full scale

HySense® C Oil condition sensors

HySense® C family

Needless to say, one thing that users want to avoid at all costs are system failures and downtimes, which is why it is crucial to be one step ahead and use preventive measures instead. Moreover, an additional trend is the change from interval-based maintenance, which is often unnecessary and costly, to condition-based maintenance instead. So what does this mean? Among other things, that being aware of the condition of the oil in hydraulic systems is absolutely vital. That is precisely the type of diagnostic and monitoring tasks for which the **HySense® C** family was developed. These high intelligence sensors are able not only to measure oil condition parameters, but also to evaluate them based on condition algorithms. The result? Users can get easy-to-understand information regarding condition changes over time and, for example, the oil's remaining life.

In addition to this, Hydrotechnik has implemented an analysis application in MultiSystem measuring devices that is designed to help the user with data acquisition, through the visualization and evaluation of measured results, all the way to generating reports.

By combining the condition sensors in the **HySense® C** family with the measuring devices in the MultiSystem series, users can get the perfect all-in-one solution for precise and simple oil condition monitoring.

Oil condition sensor overview

HySense®					
	CL 1xx	CM 100	CV 100	CX 197	CW 100
Contamination (number of particles)				X	
Viscosity			X	X	
Rel. humidity	X	X		X	
Rel. permittivity	X	X	X	X	
Conductivity	X	X		X	
Temperature	X	X	X	X	
Fill level	X				
Wear (ferromagnetic particles)					X
					

Product discontinued

HySense® CL 1xx

The HySense® CL 1xx is a high intelligence sensor that not only determines oil level precisely, but also measures the following oil condition parameters: relative humidity, relative permittivity, conductivity, and temperature. After a calibration phase, this sensor can evaluate an oil's condition and output it based on implemented condition algorithms. Moreover, the corresponding analysis application that is implemented in MultiSystem measuring devices makes it enormously easier to operate and use the sensors. Finally, the intuitive menu navigation and the stored oil database both make it easy to quickly acquire, visualize, evaluate, and store oil condition parameters.

Advantages when combined with MultiSystem measuring devices.

- | Database for storing data for specific systems and measuring points
- | Access to an integrated oil database
- | The ability to define limits
- | The ability to visualize conditions with a traffic light pattern
- | The ability to store readings
- | The ability to display histories
- | The ability to export readings via USB
- | Report template

HySense® CX 197

The HySense® CX 197 service measuring kit combines all the oil condition sensors needed for a professional and fast oil condition analysis. As a result of its heavy-duty construction and compact design, combined with MINIMESS® adapters that make setup an absolute breeze, this kit is a perfect fit for mobile use. Moreover, the corresponding analysis application that is implemented in MultiSystem measuring devices makes it enormously easier to operate and use the sensors. Finally, the intuitive menu navigation and the stored oil database both make it easy to quickly acquire, visualize, evaluate, and store oil condition parameters.

HySense® FO 200

The HySense® FO 200 is an all-purpose strain gauge tension load cell that detects longitudinal and transverse strain and uses it to determine the corresponding forces. The threaded rod design makes it easy to quickly integrate the load cell into systems, and the compact and lightweight construction are important advantages in comparison to other standard tension load cells.

Typical applications:

- | Maximum construction machinery and harvester tensile forces
- | Forces in belt tensioners and Bowden cables
- | Tensile forces in universal testing machines
- | Wire rope and spring force measurements
- | Production process monitoring and documentation
- | Tensile forces on cranes, cable cars, elevators

HySense® FO 300

As a result of its small and extremely slim design, the HySense® FO 300 load cell is an ideal choice for applications where there is barely any room to work with. Moreover, its special housing geometry and stainless steel housing material mean that it can be used in harsh environments.

Typical applications:

- I Fully automated production centers
- I Measuring and monitoring systems
- I Production process monitoring
- I Toolmaking
- I Universal testing machines

HySense® TQ 100

The HySense® TQ 100 is a rotating torque sensor with integrated direction detection that was developed both for temporary and permanent use. It features high-quality, low-wear slip rings that make it possible to achieve precise and stable signal transmission. In addition, the feather keys on both sides and the housing design make direct mounting fast and easy.

Typical applications:

- | Measuring constant and varying torques
- | Friction torque in gearing and bearings
- | Measurements on rotating shafts
- | Production process monitoring and documentation
- | Testing and adjusting screw/nut drivers
- | A wide variety of adjustment devices in the industry

Dimensions in mm

General characteristics	
Sensor principle	Strain gauge, slip ring
Measured variable	Torque
Measuring range	1 ... 500 Nm
Output signal	12 ±8 mA ISDS
Measuring accuracy	0.1% of full scale
Electrical connector	M16 x 0.75, 6-pin
Ambient temperature	-10 ... 60 °C
IP degree of protection	IP50 (DIN EN 60529)

Measuring range Nm	Ø B mm	C mm	D mm	E mm	K mm	H mm	Weight g	Part No.

HySense® RS 100

The HySense® RS 110 is an optical speed sensor that uses reflective mark detection. This method makes it possible to obtain particularly accurate and reliable measurements, since the measured results are not affected or distorted by the rotor's material or shape. Moreover, the available mounting base ensures that the sensor can be installed on metal surfaces easily and quickly.

How it works

This sensor works with a pulsing red light (LED) that is reflected by a special mark on the rotating part. A polarizing filter makes sure that only reflected light pulses will be evaluated and that disruptive reflections (e.g., unevenness on the surface, shiny metal parts, keyways, and high-contrast areas) will not be detected.

Typical applications:

- l Determining the hydraulic efficiency of pumps
- l Speed measurements on fans for hydraulic cooling units

General characteristics	
Sensor principle	Autocollimation
Light source	Power LED with visible red light
Response time	500 µs
Range	0 ... 500 mm (standard reflectors)
Pulsing frequency	500 Hz / 30000 min-1
Signal repetition rate	Max. 500 Hz
Electrical connector	M16 x 0.75, 5-pin
Body material	Glass fiber reinforced
Ambient temperature	-40 ... 60 °C

Model	Output signal	Weight	Part No.
HySense® RS 100	Frequency / ISDS	140 g	3130-08-01.01
Magnetic base	—	—	3130-03-03.00
Reflective film (50 pieces)	—	—	8840-02-01.01

HySense® RS 3xx

The HySense® RS 3xx is a high-precision frequency sensor that converts the motion of diamagnetic materials into pulses using the GMR effect. The use of this effect makes precise frequency measurements possible even with very small gears and low rotational speeds.

General characteristics	
Sensor principle	GMR effect
Frequency range	0.5 ... 1800 Hz
Measuring accuracy	±1 pulse
Electrical connector	M16 x 0.75, 5-pin / M16 x 0.75, 6-pin
Body material	Aluminum
Ambient temperature	-20 ... 85 °C
IP degree of protection	IP65 (DIN EN 60529)
Weight	60 g

Model	Output signal	H	Part No.
HySense® RS 300	Frequency, ISDS	104 mm	3107-00-S-49.00
HySense® RS 310	Frequency		3107-00-49.00

HySense® RS 5xx

HySense® RS 5xx is Hydrotechnik's revolutionary inductive sensor series, which detects the frequency of rotating components with extremely high accuracy and stability. These sensors contain a microcontroller with sufficient computing power, and are accordingly also referred to as "intelligent sensors." In turn, this sensor intelligence makes it possible to modify a signal on the basis of linearization tables in the sensor itself so that a compensated output signal can be output (RS 506, RS 510).

A heavy-duty and compact design makes easy and fast installation possible and means that these sensors can be used in harsh environments. This sensor series was developed specifically for Hydrotechnik turbine flow meters, but can also be used for a broad range of measuring tasks.

HySense® PO 180

The HySense® PO 180 is a high-resolution draw-wire position sensor. Its compact and heavy-duty design makes it impervious to environmental conditions, which is why it is an ideal choice for use with cranes, hydraulic presses, and a broad range of equipment for which travel or position changes need to be measured.

General characteristics	
Sensor principle	Electromagnetic induction
Measuring range	1 ... 10000 Hz (RS 500 & RS 506) 1 ... 5000 Hz (RS 510)
Measuring accuracy	±1 pulse (RS 500) ±0.1% of full scale (RS 506 & RS 510)
Electrical connector	M16 x 0.75, 6-pin / M12, 4-pin*
Mechanical connection	M14 x 1
Body material	Aluminum
Ambient temperature	-25 ... 85 °C (RS 500 & RS 510) -20 ... 70 °C (RS 506)
IP degree of protection	IP67 (DIN EN 60529)
* More available upon request	

Model	Output signal	Function	Electrical connector	H	Part No.

HySense® VB 110

The HySense® VB 110 is a capacitive vibration sensor that was engineered specifically for low-lag data acquisition in difficult ambient conditions. The permanent magnets integrated into the base ensure that the sensor can be installed on metal surfaces easily and quickly.

Measuring range of 0 ... 3000 mm

Dimensions in mm

Other measuring ranges

General characteristics	
Sensor principle	Capacitive acceleration sensor
Frequency range	1 ... 100 Hz
Measuring range	±50 G
Output signal	Frequency (square wave signal)
Nonlinearity	< ±2%
Measuring accuracy	< ±2%
Electrical connector	M16 x 0.75, 5-pin
Mechanical connection	Magnetic base
Body material	Plastic; resistant to fuels, oils, salts, and specific chemicals
Ambient temperature	-20 ... 85 °C
IP degree of protection	IP66 (sensor element)
Weight	547 g
Part No.	3183-71-01.00

HySense® SC 100

The HySense® SC 100 is an intelligent, multi-functional transducer that not only converts frequencies to an analog 4 to 20 mA signal, but is also able to determine the phase relationship between two input frequencies and output it via a switching output. This makes it possible, for example, to detect and output the flow direction for a gear flow meter (two input frequencies). This sensor intelligence makes internal sensor signal compensation and phase evaluation on the basis of stored linearization tables possible.

Dimensions in mm

General characteristics	
Measured variable	Frequency (optionally two frequencies)
Measuring range	0 ... 5000 Hz
Output signal	4 ... 20 mA, ISDS (optional switching output Ub+)
Measuring accuracy	±0.1% of full scale
Electrical connector 1	M16 x 0.75, 6-pin
Electrical connector 2	M16 x 0.75, 6-pin
Body material	Aluminum
Ambient temperature	-25 ... 85 °C
IP degree of protection	IP67 (DIN EN 61076-2-106)
Weight	75 g
Part No.	3410-6600-3433D1V

Hydrotechnik measuring systems: Continuity and innovation

Measuring systems

Trendsetting details and innovative solutions

As you well know, you need pressure, temperature, and volumetric flow rate measurements in order to monitor, control, and diagnose your pressurized systems.

Moreover, by keeping a record of your measurement data, you can obtain a basis for analyzing measured data.

With their product characteristics, Hydrotechnik handheld measuring devices are sure to provide you with the functions you need for your condition monitoring applications when used in combination with our professional software. Moreover, our measuring systems are able to record stationary and mobile sensor data with three to 42 channels. In addition, continuous and event-based measurements (i.e., the measurement starts only after a specific reading is reached or a specific event occurs)

can be configured, and our measuring systems feature the option of conveniently and safely transmitting measurements wirelessly in real time.

Hydrotechnik measuring systems are also designed to enable you to graphically prepare your measurements, generate measurement reports, and reproduce test and measuring specifications without any programming skills. One of the main characteristics is the devices' user friendliness and flexibility, which make it possible to work with virtually any industrial measurement variable. From the entry-level model to our mobile all-rounder, Hydrotechnik measuring devices are designed to be universally

MultiHandy 2025

Are you interested in using high-precision measurements for complex technical systems instead of the old analog measurements? Then make the switch to Hydrotechnik digital measuring technology and see how your measurements become more accurate and reliable than ever before!

- | Easy and fast: Connect, measure, document!
- | Flexible and versatile: Current, voltage, and frequency inputs for all industrial sensors.
- | Digital and powerful: Test probes can be immediately detected and analyzed.
- | Precise and enduring: Legally required documentation can be documented.
- | Ready to go: Fast data transmission and intuitive report generation.

Our MultiHandy 2025 is available in a kit customized according to your needs and including two HySense® PR 509 pressure sensors.

MultiPanel 2025

The display that can remember! The **MultiPanel 2025** is designed to cost-effectively consolidate both recording and displaying measurement data into a single unit. You can also use the integrated HYDROlink6 ADVANCED software key with a PC or laptop in order to visualize measured values on external monitors.

- | Simple and intuitive menu navigation despite small dimensions.
- | Backlit LCD display makes it easy to read measurement values.
- | Integrated HYDROlink6 ADVACED software key (makes it possible to show measurement values on external monitors by using a PC or laptop)
- | Excellent connectivity: TTL switching contact and trigger inputs and outputs

MultiHandy 3020

Are you looking for a measuring device that will enable you to monitor small to medium-sized systems in harsh environments?

We have the answer for you: The MH3020!

With three input channels, a heavy-duty aluminum housing, and a USB port, the **MultiHandy 3020** reliably and cost-effectively meets the essential requirements for the mobile acquisition of measurement data in harsh environments.

- | Versatile: Two analog channels and one frequency input channel
- | User-friendly: Large buttons, backlit display
- | Field-ready: Heavy-duty construction with aluminum housing
- | Large internal memory: For approx. 1 million readings per recording
- | High-capacity battery: For measuring the whole day without having to stop and charge

MultiHandy 3020	
Part No.	3160-00-72.00

MultiSystem 4070

Do you need measurements other than just pressure, temperature, and flow rate? Do you want to integrate data for multiple measurements or entire test sequences into your recording in a user-friendly and cost-effective manner? Do you want to know how your measurements are doing at any time and from anywhere?

The completely new MultiSystem 4070 is the most efficient way to get started with the next level of measurement data recording!

- | New menu structure: ICON graphical user interface
- | Unbeatable connectivity: CAN bus, MultiXtend Bluetooth, LAN
- | Viscosity-compensated volumetric flow measurements: HySense® QT 600
- | Oil condition monitoring: HySense® CX 197, CV 100, CM 100, CL 100, CW 100, and Patrick
- | Maximum effectiveness: Lithium-ion battery technology; runtime ≥ 10 h
- | Fast charging function ≤ 3 h

MultiControl 4070

Do you want to monitor your vehicles or systems during operation and record measurement data comprehensive and efficient? A harsh environment with dirt and moisture posed challenges to your previous measurement technology? The MultiControl 4070 offers the identical performance of the MultiSystem 4070 and convinces with a robust design and the IP65 protection class. Operation and configuration are very easy and comfortable with the integrated HYDROlink6 Advanced Software via your PC or laptop.

MultiSystem 4070	
Part No.	3160-00-83.00
Included:	
One MultiSystem 4070	One USB Stick
One power adapter	One Software HYDROcom6 ADVANCED
1x USB cable	1x plastic case
The measuring systems MS4070 & MS5070 require a country-specific power supply cable for the power	
EU power cord	8812-20-12-03
UK power cord	8812-20-12-04
USA/Japan power cord	8812-20-12-05
Australia power cord	8812-20-12-06

MultiControl 4070	
Part No.	3160-00-84.00
Included:	
One MultiControl 4070	One USB drive
One One power adapter	One Software HYDROlink6 ADVANCED
One USB cable	One plastic case
One ethernet cable	

Cables

MultiSystem 5070

Do your tasks require maximum performance and capacity when it comes to mobile measurement data recording? Do you need to record and visualize a large number of measuring channels and highly complex test sequences precisely, including in danger zones?

The MultiSystem 5070, combined with professional software, is the perfect solution for recording and analyzing your readings regardless of the application. To put it simply, it is essential for every fluid specialist and a valuable tool for professional service technicians.

Wireless data transmission via MultiXtend Bluetooth minimizes the time spent in danger zones, and complex measuring tasks can be safely and efficiently recorded with predefined test sequences. Moreover, favorites can be freely chosen and screenshots can be saved, ensuring maximum ease of use.

- | Precise representation: 5" sunlight-readable color display
- | User friendly: ICON graphical user interface
- | Maximum memory: 500 recordings with up to 6 million readings per recording
- | Maximum sampling rate: Up to 10 kHz
- | 2 separate CAN interfaces: Incl. wake-up / trigger function
- | Viscosity-compensated volumetric flow measurements: HySense® QT 600
- | Oil condition monitoring: HySense® CV 100, CM 100, CL 100, CW 100, and Patrick

MultiSystem 8050

Do you need a large number of channels and the perfect proportion of input/output channels for your recording tasks? Are you interested in optimally visualizing and safely recording an extensive amount of readings for your stationary measuring task?

The **MultiSystem 8050** is the perfect measuring system for your stationary applications. With a total of 32 (optionally 40) channels and a large touch display, it is able to visualize a large number of readings in a clear and manageable manner, regardless of whether as numeric values or as a line chart.

- I Perfect for complex measurements: Up to 30 channels simultaneously on the TFT monitor
- I User-friendly and clearly laid out: Touchscreen monitor and logical menu structure
- I Live reading analysis: A large graphic display for perfect line charts
- I Universal versatility: Analog and digital inputs and outputs and a wide variety of interfaces

MultiSystem 8050

Part No.	3160-00-65.00	
	3160-00-65.01	(14x Calculated / CAN)

Included:

One MultiSystem 8050	One HYDROcom6 PROFESSIONAL software
One power adapter	One service connector
One USB cable	

Cables

MultiControl 8050

The MultiControl 8050 is a version of the MultiSystem 8050 without a display, but packs the same amount of power and performance as the latter. Simply hook up the device to your PC or laptop via USB or LAN and use the integrated HYDROlink6 ADVANCED software key to configure it easily and conveniently.

MultiControl 8050	
Part No.	3160-00-66.00
	3160-00-66.01 (14x Calculated / CAN)

Included:	
One MultiControl 8050	One HYDR0com6 PROFESSIONAL software
One power adapter	One HYDROlink6 ADVANCED software
One USB cable	One service connector

SEG 1060

Simply display your readings! Use the SEG 1060 flush-mounting device for control panels in order to show your readings clearly. The small installation size makes it easy to integrate into systems, and the four buttons on the front panel, together with the logical menu structure, guarantee ease of use. The large digital display can be comfortably read from a distance. Finally, the SEG 1060 is optionally available with an analog and digital output.

- | Measuring device for flush-mounting in control panels: With configurable input for analog or frequency sensors
- | Optimum visualization: The large digital display is easy to read
- | Great flexibility: With optional outputs
- | Easy to use: Only four buttons and a logical menu structure

“Patrick” the particle counter

Do you want to significantly reduce machine downtimes due to failure or maintenance and schedule them in the most cost-effective manner possible?

That is where the “Patrick” particle counter comes in. This unit makes it possible to monitor contamination levels and fluid contamination trends with high precision, and changes in specific parameters can be used to draw conclusions regarding the need for maintenance and repairs. In other words, “Patrick” makes it possible to diagnose and monitor the oil quality in hydraulic systems.

The contamination class can be displayed in conformity with ISO4406:99 / SAE AS 4059 / NAS 1638 / GOST 17216.

- I Detect contamination in fluids
- I Minimize machine failures
- I Schedule downtimes in a cost-effective manner
- I Data transmission via CAN, USB (adapter), or RS-232

Patrick Optical particle counter	
Part No.	3160-00-76.00
Sensor principle	Light obscuration
Included:	
One Patrick	One quick start guide
Attachments	
Flow control valve max. 350 bar	2103-A0-02.00
Contamination classes	
Number	4
Type	ISO 4406:99 // SAE AS 4059 // NAS 1638 // GOST 17216
Measuring range (ISO 4406:99)	0 ... 24
Calibrated range (ISO 1171:2010)	10 ... 22
Measuring accuracy	±1
Fluids	
Type	Mineral oil (e.g., HLP) // Ester fluids (e.g., HEES) // Biodegradable fluids (e.g., HETG) // Diesel fuels
Temperature	-20 ... 85 °C
System conditions	
Flow rate	50 ... 400 ml/min
Static operating pressure	600 bar / 8700 psi
Dynamic operating pressure	420 bar / 6100 psi
Connection	
Fluid connection	Two MINIMESS® 1620 units
Interface	RS-232, CANOpen, J1939
Analog outputs	1
Analog output signals	4 ... 20 mA
Memory	
Data memory	3072 measurements
Display	
Display size	2.2"
Display type	Monochrome LCD display
Max. classes shown	4
General	
Degree of protection	IP65
Operating temperature	-20 ... 85 °C at 0 ... 95% rel. humidity

Patrick in the Box

Patrick in the Box is our offering for anyone looking for a portable particle monitoring solution!

The device can be used to immediately analyze samples from oil tanks and sample bottles in regard to contamination, ensuring that you can prevent hydraulic system failures and schedule servicing work as appropriate. This proactive maintenance approach is ideal for locations with multiple storage tanks / systems and makes this analysis device the ultimate solution for measuring and diagnostic work.

Patrick in the Box	
Part No.	3402-CP20-D200-000
Sensor principle	Light obscuration
Included:	
One Patrick in the Box	One DN4 hose, incl. suction filter
One power adapter	One manual
One DN4 hose, incl. suction filter	
Attachments	
Pressure reducing valve max. 350 bar	5117-06-20.00

Patrick in the Box	
Contamination classes

HYDROcom6

In addition to professional measuring equipment, comprehensive measuring tasks require powerful software for processing recorded data. And HYDROcom6 Base, which is available for free, is designed to provide you with a large part of the functionalities you need to do just that.

Meanwhile, HYDROcom6 Advanced/Professional can be used not only to visualize real-time readings, but also download, visualize, analyze, process, and present existing measurement data. And to generate your own measurement reports configured according to your specific needs, of course.

- I Fast data transfers: Transfer, import, and export data
- I Fast data processing: Evaluate, analyze, and process data
- I Present measurement results: Charts, tables, bar charts
- I Digital documentation: Test reports, measurement reports, QA reports

HYDROlink6

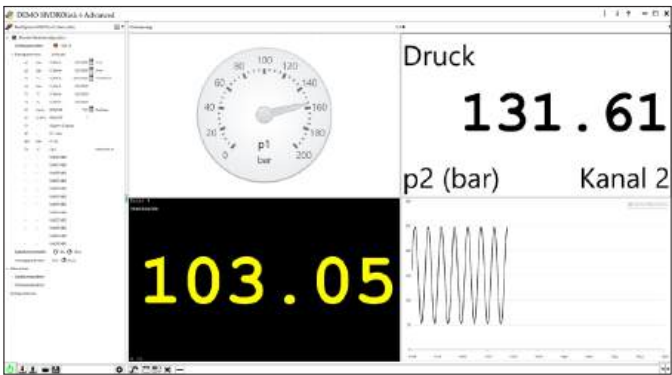

Sometimes you just need to be elsewhere! That is why Hydrolink6 makes it possible to completely configure your measuring systems with your PC or laptop regardless of whether you are on-site or on the go.

Take advantage of the highly effective remote access setup option for all measuring device/ channel / memory parameters and implement whole CANopen databases in order to make your work even more efficient.

Create highly complex test sequences for desktop and measuring system applications with the help of the new HYDROlink6 Professional.

Use a single click to generate personalized measurement reports, or use the simple real-time visualization / measurement function and the broad selection of associated layout options.

- I Efficient measuring device / channel / memory configuration
- I Full control of all functions via remote measuring system control
- I Implement CANopen databases
- I Easily generate complex test sequences (HL6 PRO)
- I Real-time visualization, incl. a wide selection of layout options

HYDRORun6

Do you want to reliably visualize highly complex test sequences? Are you interested in minimizing measurement errors with predefined test plans?

If so, you can use HYDRORun or HYDRORun lite to visualize test sequences (generated with HYDROLINK6 Professional) in a user-friendly manner. Depending on the software version, you can get a license for your existing measuring system e.g. MS4070/MS5070 or a desktop version.

- | Reliably visualize complex test sequences
- | Minimize errors with predefined test plans
- | Available as measuring system and desktop version.

HYDROcenter

Stay up to date at all times! Manuals, technical data sheets, software, and firmware updates –

HYDROcenter is there to make sure that you are always using the latest Hydrotechnik software and firmware versions. This way, your Hydrotechnik products can be updated quickly, reliably, and easily.

- | Keeps Hydrotechnik measuring systems and software products up to date at all times
- | Actively reminds you of software and firmware updates
- | Eliminates the need to spend time searching for updates
- | Provides the right product documentation directly

MultiXtend

Measuring systems

Do more with your measuring system! With the MultiXtend product family, you can expand your measuring system or add additional functions to it. These additional devices can, for example, provide additional inputs for sensors with an analog or frequency input signal, measure electrical variables, be used to connect thermocouples, or connect to your existing network via LAN or wirelessly via Bluetooth.

MultiXtend Bluetooth

Not interested in staying in danger zones any longer than you have to? Or in transporting, connecting, and possibly damaging unnecessary cables?

Then the MultiXtend Bluetooth module, which makes it possible to take advantage of all the benefits of wireless data transmission, is the perfect device for your needs. Reduce costs by using fewer expensive measuring cables. Make use of reliable data transfers at distances of up to 300 mm with the paired transmitter / receiver unit. Safely record readings (for rotating machines, for example) outside of danger zones.

MultiXtend Bluetooth	
Part No.	316A-00-10.00
Included:	
MultiXtend Bluetooth module	J2 connecting cable (MX BT – measuring system)
USB Bluetooth receiver	

MultiXtend LAN

Do you want to be able to access your measuring system from anywhere in the world? How about editing parameters and starting measurements remotely?

You can do so by quickly, easily, and affordably expanding your existing measuring system with the MultiXtend LAN. With this expansion, you can connect your MultiSystem to an existing network (TCP/IP).

Take advantage of network-based reading acquisition, incl. measuring device / measuring channel setup options via HYDROlink6 ADVANCED.

MultiXtend LAN	
Part No.	316A-00-12.00
Included:	
MultiXtend LAN module	

MultiXtend A / f / Thermo

Does your measuring task go beyond what your existing measuring equipment can handle? No problem! With the devices in the MultiXtend A, f, and Thermo series, you can connect additional sensors to a MultiSystem. The sensor signals are digitized and transmitted to the measuring device through the CAN bus. And while MultiXtend channel expansions A and f each provide four M16 inputs for analog/frequency sensors and can be used with input ranges of 0 ... 20 mA or 4 ... 20 mA, MultiXtend channel expansion Thermo makes it possible to connect type J or K thermocouples.

MultiXtend A, f, Thermo		
Part No.	A	3160-00-00.72AB
	f	3160-00-00.77
	Thermo type J	3160-00-00.73JB
	Thermo type K	3160-00-00.73KB
Included:		
MultiXtend (A/ f/ Thermo) module		

MultiXtend UI

Are you missing the right tool for integrating current or voltage measurements into your system? In that case, you can use the MultiXtend UI to measure current or voltage at an analog measuring input (0 ... 20 mA). In addition to the galvanic isolation of the measuring inputs, the unit comes with the option of manually activating a PWM filter.

- Available in two versions:
- I. MultiXtend UI ± 30 VDC / ± 2 ADC
 - II. MultiXtend UI ± 60 VDC / ± 4 ADC

MultiXtend UI		
Part No.	I.	316A-00-00.20
	II.	316A-00-00.30
Included:		
MultiXtend UI module		

MultiXtend Split

Do you want to provide a single analog sensor signal to two receivers? We have the solution for you! The MultiXtend Split is a galvanically isolated, passive, feedback-free signal splitter that can be used to connect a single analog sensors to two receivers at the same time. This means, for example, that you can connect a permanently installed pressure sensor to a controller while also using that signal for diagnostic purposes.

MultiXtend Split	
Part No.	316A-00-00.40
Included:	
MultiXtend Split module	

MultiXtend Trigger

Are you on the lookout for a solution for storing readings on multiple measuring systems simultaneously? The MultiXtend Trigger matches this description, and can be used to send a trigger signal to a maximum of three measuring systems. A storage operation trigger will then be, for example, sent by a MultiSystem 5070 to a maximum of three additional measuring systems at the same time. This makes it possible to carry out simultaneous storage operations on up to 96 channels so that the stored information can then be automatically grouped together on a PC with HYDROcom6 or with the use of HYDROlink6.

MultiXtend Trigger	
Part No.	316A-00-00.50
Included:	
MultiXtend Trigger module

Measuring system shock protection

We are happy to introduce you to our MS4070 / MS5070 shock protectors, which are designed to make systems even easier to use under adverse conditions.

This convenient accessory, which is made of rugged NBR, improves grip and provides shock absorption protection for your MS4070 / MS5070.

Service and calibration

Service and calibration

In order for readings to be accurate and reliable and yield solid analyses, measuring devices and sensors need to be precisely adjusted and calibrated.

For us at Hydrotechnik, our customer relationships do not simply end when we sell a product. Instead, we offer professional, reliable, and high-quality maintenance, repair, and calibration services designed to help you maintain your product's value. These services are not just limited to Hydrotechnik products, but can also cover all other competing products.

Maintenance

With regular high-quality maintenance, you can rest assured knowing that your sensors and measuring devices are working perfectly and are delivering meaningful measurement results. We are experts at checking sensors and measuring devices as quickly as possible so as to minimize downtimes.

Repairs

Uncompromising quality is not just an empty slogan for Hydrotechnik, but rather something that defines everything we do. All our operations consistently conform to all the applicable quality standards, and this conformity is documented and backed up by our ISO 9001 certification, which we have had since November 1996. In the unlikely event that your equipment experiences a problem, however, we will repair your sensor or device reliably, quickly, and cost-effectively.

Calibration

Since 1986, Hydrotechnik has operated a calibration laboratory accredited by DAkkS. In 2019, this accreditation was successfully updated to the new DIN EN ISO/IEC 17025:2018 standard. We have over 30 years of calibration experience with pressure, fluid flow rates, temperature, and electrical parameters, and our test stands conform to traceable standards and meet all the requirements for an accredited calibration entity. Calibrations are carried out in conformity with all applicable guidelines and documented with internationally accepted DAkkS calibration certificates.

It is important to note that calibrating sensors, measuring devices, and measuring chains on a regular basis is essential and a prerequisite for accurate and reliable measurement results.

Measured variables and functionalities at a glance

Fluid flow rates

The Hydrotechnik calibration laboratory has three different state-of-the-art flow test stands for factory and DAkkS calibrations. A wide variety of mineral oils, plus the ability to keep them at constant temperatures, makes it possible to adjust viscosities as required with high precision.

Flow test stand I

- I Measuring range: 0.005 ... 40 L/min
- I Adjustable viscosity range: 1.2 ... 178 mm²/s
- I DAkkS and factory calibration

Flow test stand II

- I Measuring range: 2 ... 1000 L/min
- I Adjustable viscosity range: 21 ... 46 mm²/s
- I Factory calibration

Flow test stand III

- I Measuring range: 0.2 ... 600 L/min
- I Adjustable viscosity range: 1.2 ... 280 mm²/s
- I DAkkS and factory calibration

Pressure

We have two different high-precision dead weight testers for factory and DAkkS calibration available for pressure calibration. All calibration methods used are accredited in conformity with DIN EN ISO IEC 17025:2018 and adhere to guideline DKD 6-1.

Vacuum and overpressure:

- I Measuring range: -1 ... 7 bar
- I Pressurizing fluid: Gas
- I DAkkS and factory calibration

Overpressure:

- | Measuring range: 3 ... 1200 bar
- | Pressurizing fluid: Oil
- | DAkkS and factory calibration

Temperature

We have various temperature calibration baths with special temperature calibration oils available for temperature calibration. These calibrations are carried out with comparison measurements using traceable standards.

- | Temperature range: -50 ... 250 °C
- | Temperature calibration fluids: Silicone oils and water
- | Factory calibration

Electrical variables

We have a variety of calibration devices available for calibrating Hydrotechnik measuring devices.

Typical variables:

- | | |
|----------------|----------------------|
| Current (A) | Factory calibration |
| Voltage (V) | Loaners upon request |
| Frequency (Hz) | |

Viscosity and density

The Hydrotechnik calibration laboratory has a falling ball viscometer and the corresponding density determination balance for determining the viscosity and density of liquids.

Measured variables

- | Dynamic viscosity (mPa*s)
- | Density (g/cm³)

Additional services

Our decades of experience, combined with our professional measuring equipment, enable us to cover a broad range of specific measuring tasks. Upon request, we will be glad to take care of specific calibrations and measurements, such as determining the performance of one-way restrictors (measuring the pressure differential vs. flow).

Certifications and accreditations

- | Hydrotechnik GmbH in conformity with DIN EN ISO 9001:2015
- | Accredited calibration laboratory in conformity with DIN EN ISO/IEC 17025:2018
- | Accredited methods for fluid pressure and flow
